CLAVEL STEEL KONSTRUCTION COMPANY LTD

BRAND COLOUR PALETTE

Visual colour standards derived from the supplied logo and marketing artwork

1. Brand Colour Direction

Clavel Steel Konstruction Company's visual identity is built around a strong industrial palette: green as the dominant brand colour, deep forest green and near-black as grounding colours, metallic silver to represent steel and fabrication, and a controlled yellow accent inspired by the welding/spark element in the logo. White provides clean contrast and visual breathing room.

2. Primary Brand Palette

Clavel Green
`#228940`

Primary brand colour
Use for the CSK wordmark, major headings, buttons, icons and key brand accents.

Clavel Bright Green
`#2DA447`

Secondary / highlight green
Use for gradients, highlights, active states and visual emphasis.

Deep Forest Green
`#032C16`

Dark brand background
Use for hero backgrounds, dark sections, footer areas and premium industrial layouts.

Signal Yellow
`#D5DD27`

Accent colour
Use sparingly for welding/spark motifs, small highlights, indicators and calls to action.

Industrial Silver
`#808482`

Metallic neutral
Use for steel/metal visual elements, borders, secondary graphics and industrial accents.

Charcoal
`#20201E`

Dark neutral
Use for body text on light backgrounds, outlines, cards and supporting UI elements.

Near Black
`#000C00`

Deepest neutral
Use for high-contrast backgrounds, logo surroundings and premium dark layouts.

White
`#FFFFFF`

Light neutral
Use for text on dark backgrounds, clean layouts, cards and negative space.

3. Recommended Colour Hierarchy

Level	Colour	Recommended Use
Primary	Clavel Green #228940	Main identity colour. Use most prominently across headings, buttons, icons, graphics and branded sections.
Secondary	Clavel Bright Green #2DA447	Use to create energy, gradients and highlights without overpowering the primary green.
Dark Base	Deep Forest Green #032C16	Preferred dark brand background for premium website sections, hero areas and footers.
Accent	Signal Yellow #D5DD27	Use in small amounts only. It should remain an accent rather than a competing primary colour.
Metallic Neutral	Industrial Silver #808482	Represents steel and machinery. Ideal for borders, technical graphics and metallic visual treatments.
Neutral	Charcoal #20201E / Near Black #000C00	Supports typography, contrast and dark industrial layouts.
Light Neutral	White #FFFFFF	Provides clarity, contrast and clean presentation.

4. Suggested Website Application

- Hero / header: Deep Forest Green or Near Black background with white text and Clavel Green highlights.
- Primary buttons: Clavel Green with white text. Use Signal Yellow only for special high-priority actions.
- Headings: Deep Forest Green on light pages or White on dark pages.
- Cards and service sections: White or very light neutral backgrounds with Clavel Green icons and Industrial Silver details.
- Industrial imagery: Use Industrial Silver and Deep Forest Green overlays to reinforce the steel/engineering identity.
- Footer: Near Black or Deep Forest Green with white text and restrained green/yellow accents.
- Logo usage: Preserve the existing green, metallic and yellow relationships; avoid introducing unrelated bright colours.

5. Suggested Colour Combinations

Premium Industrial — #032C16 + #228940 + #FFFFFF. Best for corporate website hero sections and major presentations.

Steel & Engineering — #20201E + #808482 + #228940. Best for industrial, fabrication and technical content.

Brand Energy — #228940 + #2DA447 + #D5DD27 + #FFFFFF. Best for marketing graphics and calls to action.

Clean Corporate — #FFFFFF + #032C16 + #228940 + #808482. Best for About, Services and corporate documentation.

6. Colour Usage Rules

- Green should remain the dominant brand family and should account for the strongest visual identity across branded materials.
- Signal Yellow should be used sparingly; its strongest role is as an accent associated with welding, sparks, energy and attention.
- Industrial Silver should support the engineering/steel theme rather than dominate the entire design.
- Deep Forest Green and Near Black are preferred over generic pure black when a branded dark background is required.
- White should be used generously to maintain readability and a modern, professional appearance.
- Do not combine every palette colour at equal intensity in the same layout. Use one dominant colour, one supporting colour and limited accents.

7. Colour Extraction Note

The HEX values in this document are practical digital approximations derived from the supplied Clavel Steel Konstruction Company logo and marketing artwork. Because the source artwork contains gradients, metallic effects, lighting and compression, these values should be treated as the working digital brand palette rather than certified Pantone, CMYK or print-production specifications. For professional printing, final CMYK/Pantone equivalents should be established from the approved master logo artwork.

8. Core Brand Palette at a Glance

- **Clavel Green #228940** — Primary brand colour.
- **Clavel Bright Green #2DA447** — Secondary / highlight green.
- **Deep Forest Green #032C16** — Dark brand background.
